Assignment -2
Python Programming

| Assignment Date	26 September 2022
Student Name	Niranjani R
Student Roll Number	210819106048
Maximum Marks	2 Marks

Question-1:

Build a python code, Assume you get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

Program:

```
t=int(input("Enter the Temperature:")) #Temperature h=int(input("Enter

the Humidity:")) #Humidity

while(t>35): print("Buzzer

    ON")
```

Program: import time from
random import randint
file=open("data.txt","a")
n=5 for i in range(n):
   humidity=randint(0,100)+1
   temperature=randint(-
   100,100)+1 if humidity>45:
   print("\n \n Humidity High")
   print(humidity)

     file.write("\nHumidity")
     file.write(str(humidity))

   if temperature>30:
      print("Temperature High")
      print(temperature)

          file.write("\nTemperature")
          file.write(str(temperature))
   time.sleep(1) file.close()

```
import time
from random import randint
file=open("data.txt","a")
n=5
for i in range(n):
    humidity=randint(0,100)+1
    temperature=randint(-100,100)+1
    if humidity>45:
        print("\n \n Humidity High")
        print(humidity)

        file.write("\nHumidity")
        file.write(str(humidity))

    if temperature>30:
        print("Temperature High")
        print( temperature)

        file.write("\nTemperature")
        file.write(str(temperature))
    time.sleep(1)
file.close()
```

```
